What's New in the?

Fractals are a unique art form using mathematical formulas to create art with an infinite diversity of form, detail, color and light. In simple terms, a fractal is a graphical image that represents the behavior of a mathematical equation. Fractals are used especially in computer modeling to create irregular patterns and structures found in nature. Fractals, in art and nature, can range from beautiful symmetry to the chaotic, from a perfectly symmetrical snowflake to a massive chaotic thunderhead cloud. But regardless of their symmetry or level of chaos fractals are everywhere we look and hopefully the beauty of this fractal art captivates your imagination! Fractals are, as the name implies, self-similar. This is to say that one part of the image looks like the other parts. The dividing line between the parts is called the scale. Thus, you can create a sand-tiger image that looks exactly like the tiger. The only differences are that the scale of the sand tiger is larger or smaller than the real tiger. Fractals come in many forms. You can create fractals of paint streaks or tire tracks. You can create fractals of dust on a windowpane or fractals that mimic leaf veins or the patterns of sunbeams on water. If you want to recreate fractals in paint, the program Fractale lets you bring to life the look of fractals in computer graphics, without the need to use fractal mathematics. You can create fractals as ordinary drawings, and even perform fractal operations in the paint program. With FractalArts 2002, you can use any of these paint operations on any type of image. You can translate, rotate, shear, dilate, displace and create fractals and fractal-like images in any type of paint program. Also new in this version are a variety of geometric fractals. Portions of the many great fractal images in the FractalArts 2002 Examples Library have also been automatically included in the program. You can view fractal images in this library as JPEG or TIFF files, or you can create your own fractal images by drawing them directly in the program, and save them as JPEGs or TIFFs. You can also add notes and comments about the fractal art to the library images. Some fractal images are provided in the library as a GIF format files. These GIFs, because they are limited to 256 colors, are best viewed as GIFs.
