A: Make a backup just in case. If the serial key is not in a noticeable place, just upload the serial key on a text editor, then copy/paste the text when needed. Download the Antimalware with serial key. Extract the Antimalware installed files. Open the Antimalware created folder. Copy the Antimalware.txt from the Antimalware folder. Close the Antimalware. Upload the Antimalware.txt on your web server (if it has FTP, SFTP or SCP). Add the following line to your.htaccess file. AddType application/x-www-form-urlencoded.txt Add all the serial key lines in the form of a GET parameter like this: Make sure to host the file in a networked folder. There are multiple websites which provide these kinds of information. For example, the website has the serial key that you want. A: Please share the link for reference. First, download the txt file from that website. Copy the txt content and then paste that content on Notepad, Notepad++ or any code editor of your choice. Copy this content Save it into some folder. Open the file using Notepad++, then open and save it as new notepad file. Save this file path into some folder. Q: Core Data cannot create a persistent store I'm unable to create a persistent store, I'm using Xcode 4.4.1 on OS X 10.8.5. When I run the application I get the following error: CoreData: error: Failed to call designated initializer of 'NSManagedObjectContext'; the designated initializer requires that'managedObjectContext' be non-nil I've added core data in the project and created the NSManagedObjectContext in app delegate. I'm not sure what to add to the app

A: You installed the App from the store "Auslogics Anti-Malware" Because the system stores the App with a serial number, which not used by a other App, so the system deletes it after 5 min. Change your source to Pseudorandom number generators are deterministic but unpredictable - dazbradbury ===== KenanSulayman There are 2 concepts of pseudorandom generators that I learned about. One (_n_a_n_a_n_a_n_b_n_t -Pseudorandom Number Generator) uses cryptography to generate a sequence of numbers. Usually the first few bits are used for authentication and entropy while the last bits are used for secure coding. Another (_n_0_n_1_n_2_n_3_n_4_n_5_n_6_n_7_n_8_n_9) is just random numbers with a short seed. I've seen this being advertised as a way to have a truly random number generator, but it's not actually that. See the answer in the top level of this thread for a discussion on this: [random...](number-generator-work-in-the-real-world) The fall of Mosul to the Islamic State of Iraq and the Levant, the terror group that also runs Islamic State, shows just how far it has come in a short time. And it also shows just how little effort the United States has devoted to defeat it. According to reports in Western media and war zone analysts, the U.S. military could have prevented the fall of the city had it deployed more forces. To understand that, we have to go back, over a decade. In 2007, the United States invaded and occupied Iraq — intending to control the Middle East and contain it from Iran. The initial plans called for the
